INVITATION and CALL FOR ABSTRACTS

Dear Colleagues,

It is a great pleasure to invite you to attend the Satellite Symposium of ISAN 2007 on October 3, 2007 in Wakayama City. The aim of the symposium is to review the current progress in our understanding of the physiological mechanisms involved in neural control of the cardiovascular system in normal and disease states. Cardiovascular homeostasis is mainly controlled by complex central mechanisms, many of which are still not fully understood. To understand the potential mechanisms of cardiovascular diseases such as hypertension, heart attacks, renal failure and stroke it is extremely important to expand our general knowledge of these central mechanisms. We would like to invite you to attend this symposium to exchange new insights into understanding the central mechanisms of cardiovascular control. Internationally reputed researchers in this field will give presentations on their recent work. In addition, there will be poster sessions and social events that provide ample networking opportunities. General information including registration information is provided below. We look forward to welcoming you all to Wakayama City.
